This represents a controlled increase in the dynamic profile of a tablet, which reaches and maintains a maximum volume after a period of time (depending upon the ratio of the hydrodynamic fluid-imbibing polymer, to hydrostatic pressure modulating agent). Figure 4 shows the corresponding drug release (dissolution profile) for a formulation comprising a hydrostatic couple of the present invention, and displays a linear, zero-order release of an agent of interest for over 16 hours. Figures 2 and 4 demonstrate how the volume increase in a --

-- delivery system comprising a hydrostatic couple is reduced, resulting in an increased and continuous efflux rate. Because the rate of efflux of the agent of interest is independent on the concentration of the agent but dependent on the hydrostatic pressure within the delivery system, the kinetics of agent release is zero-order.

**Examples 3-6:**

In these examples hydrostatic delivery systems for extended release formulation of various therapeutic agents are presented. Two formulations (Formula 1 and Formula 2) are used to illustrate how the hydrostatic couple as described herein can be used to achieve zero-order kinetics and predictably different release rates. Formula 1 exhibits faster rates of drug release than that observed with Formula 2. The rate of release of the agent of interest may be selected considering several variables, for example, but not limited to the solubility of the agent of --

-- interest, and pharmacological activity of the agent of interest. For example, with decreased solubility of an agent of interest, faster release of the agent may be desired such as that provided by, but not limited to, Formula 1. In the case of a soluble agent of interest, slower release of the agent from the delivery system may be desired, for example, but not limited to, using a hydrostatic couple as provided in Formula 2. It is to be understood, however, that the formulation of the hydrostatic couple may be varied as required to obtain a desired rate of release of an agent of interest. --
